Flow sensitive shutdown switch	YES	YES
Optional battery backup time clock	YES	YES
Available in Deluxe Light Model (includes inbuilt 12v pool light transformer)	YES	YES

## FEATURES

Manufacturing LEADING EDGE SALTWATER TECHNOLOGY since 1988, SALTmate have designed and constructed their chlorinators specifically to be weather protected to an I.P 34 rating with a water resistant casing. This is to ensure that it will withstand even the harshest Australian climate.

SALTmate Saltwater Chlorination Systems are also constructed with a high production, high flow rate parallel mesh or solid plate cell design and a reliable power supply system to provide efficient, economical and trouble free pool sanitisation.

Although called saltwater chlorinators, the amount of salt required is nowhere near that of the ocean. A pool with a SALTmate chlorinator is comfortable with between 0.4 and 0.7 percent salt; approximately 1/8th the salt of seawater, and slightly less salt than a human tear. This gives the pool a soft, silky feel on your skin with a more pleasant taste.
