Added Protection for Pool equipment

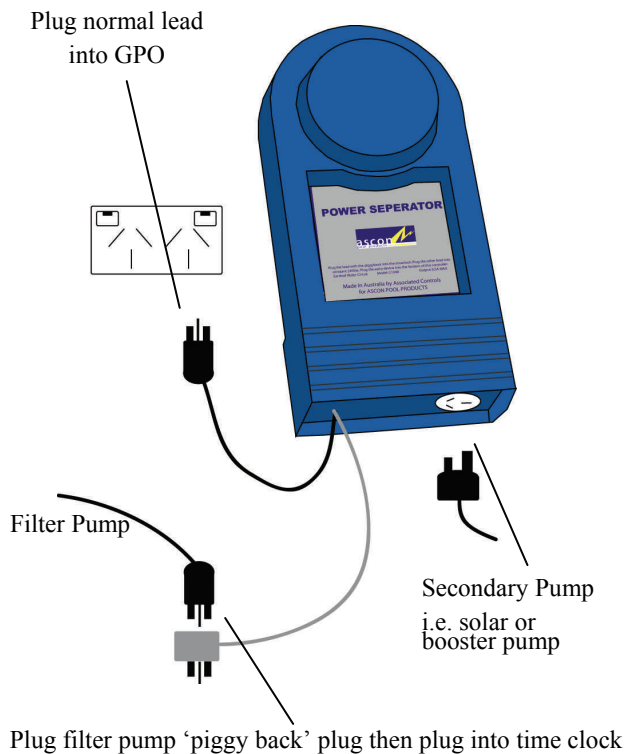

The Ascon Pool Products Power separator is designed to draw the power from the mains to reduce power drawn through the chlorinator when more than the filter pump is plugged in. The ACPS has two power leads coming from the bottom of the unit. The 'piggy back' lead is designed to plug into

the time clock outlet—either a chlorinator or mechanical time clock. The other lead plugs into the constant 240V a.c. GPO, powering the secondary pump. The secondary unit (either Cleaner Booster pump or solar pump) plugs into the base of ACPS (see diagram). The Time clock then only supplies the first pump, and also supplies a signal. The ACPS then picks up the signal and supplies direct the power to the second pump. NOT OVERLOADING THE TIMECLOCK, and only allowing the secondary pump to come on when power is supplied to the filter pump.
